Abstract : Individual psycho-pathological syndromes were subjected to defense inhibition of the secondary signaling system in its highest instances (maniac), diffuse inhibition on a background of weakness of the basic processes (amentive), manifestations of inductive stimulation (delirious), or inhibition (melancholy) extending to the underlying levels of the CNS. In other syndromes there was observed general inhibition of the cortex (depersonalized) and a focus of pathological

TITLE: Crane with variable extension boom. Class 35, No. 176667

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 23, 1965, 43

TOPIC TAGS: crane, loading machinery, transport equipment

ABSTRACT: This Author Certificate presents a crane with variable extension boom which has a pinned supporting strut. The end of the strut is connected through a compound pulley system to the crane boom. To increase the lifting capacity with extended boom by eliminating compressive loads and to decrease crane height during transport, the pinned supporting strut is mounted at the base of the boom and is equipped with a diverting pulley mounted on the bottom part of this pulley so that the pulley forces are directed upward, opposing the forces resulting in the strut due to tension in the boom pulley system (see Fig. 1).

Serova, Irina Aleksandrovna, Vladimir Stepanovich Sluchevskiy, and Porfiriy Luk'yanovich Strelets

Proizvodstvo keramicheskikh p'yezoelementov; osnovy tekhnologii (Production of Ceramic Piezoids; Fundamentals of the Process) [Leningrad] Sudpromgiz, 1959. 98 p. 2,700 copies printed.

Resp. Ed.: V.A. Isupov; Ed.: A.G. Fomichev; Tech. Ed.: L.I. Levochkina.

PURPOSE: This booklet is intended for laboratory personnel and specialists engaged in the production of ferroelectric ceramic piezoids.

COVERAGE: The booklet reviews basic principles of the process of manufacturing ceramic piezoids from ferroelectric ceramic materials and briefly describes the most important equipment used. Designs of various apparatus and the flow sheet of the process are presented. The properties of certain ceramic ferroelectric materials and other solid solutions are presented and their chemical composition and characteristics analyzed. The preparation of ceramic material from barium and calcium titanate is described. Methods of forming ceramic piezoids under

Card 1/5

Production of Ceramic Piezoids (Cont.)

SOV/3532

high pressure, plasticizers, dry pressing and hot casting are discussed along with methods of firing, machining and glazing formed ceramic piezoids. Methods of polarizing, soldering and impregnating parts made of barium titanate are also discussed and problems of straight-flow production of ceramic piezoids and the labor and equipment required are reviewed. Appendixes indicate the principal requirements for piezoelectric parts as well as their specifications and describe methods for the complete chemical analysis of ceramic material prepared from barium and calcium titanate. Chapters I and II were written by I.A. Serova, III to VII by P.L. Strelets, and VIII by V.S. Sluchevskiy. The authors thank G.A. Smolenskiy, Doctor of Physical and Mathematical Sciences, I.A. Myl'nikova Candidate of Technical Sciences, and Engineer V.A. Isupov. There are 10 references, all Soviet.

"Effect of Alternating and Condenser Currents on the EKG of the Dog."

Warsaw, Postępy Higieny i Medycyny Doświadczalnej, Vol 17, No 3, 63, pp 347-350.

Abstract: Author analyses the EKGs obtained in fibrillation-defibrillation studies on a dog's heart with AC and condenser discharges. She notes particularly two types of ventricular fibrillation observed. One involves oscillation of segments of the ventricle with sinusoidal EKG pattern (Schwebungsform), usually reversible and susceptible to defibrillation; the other -- vibration of fibrils or minute parts of the chamber, irreversible, not susceptible to defibrillation, and an EKG pattern resembling a phonocardiogram (Geraushartig). Two Polish and one German references.

Synthesis and investigation of artificial millerite G. S. Gutsaenko, N. N. Shalukhina, and N. Kh. Aslanyan. *Izv. Akad. Nauk U.S.S.R., Ser. Geol.* 2, 112-29 (1959).—The synthesis of mono- and di-sulfides of Ni from solns. of varying acidities was studied. From aq. solns. of  $\text{NiSO}_4$ , both with and without addn. of free acid, a ppt. identical with natural millerite is obtained. The sepn. of millerite was accompanied by formation of a film of  $\text{NiS}_2$  at the liquid-gas boundary. Absence of  $\beta$ -millerite in samples of natural millerite showed that natural millerite does not form at temps. above  $300^\circ$ . From Fe-Ni solns., with and without addn. of acid, bravoite forms in addn. to millerite. Therefore, it is not true that Ni and Fe Ni disulfides always form at higher temps. (about  $300^\circ$ ). The normal order of sepn. from the solns. used in the expts. was: millerite  $\rightarrow$  bravoite, and then concn. of the remaining Fe solns. should allow  $\text{FeS}_2$  to sep. The disruption of this order is rarely observed, and then only at the boundary between solid phases.

Abstract : recently; it is not known whether the "kulan" (*Equus asinus hemionus* Pall -- a wild donkey), the yellow lemming, the "sterkh" crane (*Grus leucogeranus*) still exist. Thirteen species of mammals are on the verge of disappearing: the muskrat, the Polish marmot and the Menzbir marmot, the snow-leopard, the hunting-leopard, etc. There is a great drop in the number of flamingos, of swans, of pelicans, of bustards (*Otis tetrax*), etc., and among the reptiles, of grey monitors. A numerical survey of species of mammals and birds utilized by trade in the past and of the trade volume at different times is given, as well as a glimpse at the adversities of

Abstract : the "arkhar" (the native wild mountain sheep). Wide migrations of these wild sheep and cases of their appearance in regions from where they disappeared in the XIXth century were observed in the fall of 1951 and in the following winter. These migrations were due to food shortage after a very dry summer. In 1955 the Presidium of the Academy of Sciences, KazSSR, founded a commission for Nature Conservation. A few years ago, in Kazakhstan, there were five reservations, the total area of which was 792 thousand hectares (0.3% of the territory of the Republic); nowadays, there are two reservations (98 thousand hectares - or 0.03% of the whole territory). It is

Title: On the Occurrence of Oscillations of the Relaxation Type in  
Electron Guns

Original  
Periodical: Vestn. Mosk. un-ta., 1956, No 2, 37-44

Abstract: An attempt was made to explain the causes of occurrence of self-excited current oscillations in the space between the grids in an electron gun. Theoretical calculations are given for the potential distribution, in which it is assumed that the problem is a one-dimensional one and that the potentials of both grids are the same. It is shown that for a certain value of the current a virtual cathode occurs in the inter-grid space. Since the latter vanishes at another smaller value of the current, current oscillations of the relaxation type become possible. The authors propose that the vanishing of the

TITLE: A New Lecture-demonstration of the Propagation of Electromagnetic Waves Along a Line

PERIODICAL: Vestnik Moskovskogo universiteta. Seriya 3, fizika, astronomiya, 1960, No. 1, pp. 66 - 69

TEXT: The system described in the present paper is shown in Fig. 1. It consists of a high-frequency generator, whose energy is fed into a copper wire by means of a coaxial cable and a tuned cone. The energy propagates in the conductor as a symmetric surface wave with a field structure that is equal to that in the coaxial cable, and is shown in Fig. 2. The  $H_y$ -component of the magnetic field is determined by means of a frame antenna with a detector and a galvanometer. The following may be demonstrated by means of this device: The equivalence of the displacement currents and the conduction current, the field structure can be better demonstrated than by means of a Lecher system, and the scattering of

Slugin, S. N. Approximate solution of operator equations  
on the basis of S. A. Caplygin's method. Dokl Akad  
Nauk SSSR (N.S.) 101 (1955), 565-568, 745. (Russian)

$T = F/W$

The methods of S. A. Caplygin for the approximation of  
solutions to differential and difference differential equa-  
tions can be extended to the solution of operator equations  
on partially ordered linear spaces. The solutions are  
approximated by means of upper and lower successive  
approximations which converge monotonically. Such an  
extension was made by A. N. Baluy. Dokl Akad Nauk  
N.S. 83 (1955), 757-764. MR 14, 135. But he only  
states that this method is similar to the Caplygin's method.

from Baluev's theory. This paper contains the statement of two theorems, the first of which contains numerous conditions and is lengthy to state. The second theorem is a special case of the first, is somewhat simpler to state, and illustrates the general type of result under discussion.

Let  $P$  be an operator defined on an interval  $[x_0, \bar{x}_0]$  of a partially ordered linear space. Let  $\Gamma$  be an additive operator having a positive inverse  $\Gamma^{-1}$  and such that for all  $\Delta x > 0$ ,  $\Gamma(\Delta x) \geq P(x + \Delta x) - P(x)$ . If the operator  $\Gamma^{-1}P$  is monotonic and continuous and  $P(x_0) \leq 0 \leq P(\bar{x}_0)$ , then the least and greatest solutions in  $[x_0, \bar{x}_0]$ , denoted by  $\underline{x}$  and  $\bar{x}$ , respectively, of the equation  $P(x) = 0$  can be obtained by the iterative procedure

$$x_{n+1} = \bar{x}_n - \Gamma^{-1}P(\bar{x}_n), \quad \bar{x}_{n+1} = x_n - \Gamma^{-1}P(x_n),$$

and

$$x_n \searrow \underline{x}, \quad \bar{x}_n \nearrow \bar{x}, \quad \text{as } n \rightarrow \infty.$$

Sufficient conditions are given for the uniqueness of the solutions. It is shown that Caplygin's algorithm and two of Baluev's theorems can be deduced from these theorems.

1/2

The note illustrates the application of a general theorem [same Dokl. N S. 103, 1965, 365-368, MR 17, 387]. Four examples are given.

2

Example 1. Consider the differential equation

$$(1) \quad y' - f(t, y) = C, \quad y(t_0) = z$$

If  $y_0$  and  $y_1$  are functions satisfying, for  $t \geq t_0$ ,  $y_0(t) \leq y_1(t)$ ,  $y_0' - f(t, y_0) \leq 0 \leq y_1' - f(t, y_1)$ , and  $y_0(t_0) = y_1(t_0) = z$ , if  $f(t, y)$  is continuous in  $t$  and if  $C > \partial f / \partial y \geq -A$  ( $C > 0$ ) for all functions  $y(t)$  ( $y_0 \leq y \leq y_1$ ); then the iterative procedure

$$y_{n+1} = ze^{A(t-t_0)} + \int_{t_0}^t [Ay_n(\tau) + f(\tau, y_n(\tau))] e^{A(t-\tau)} d\tau$$

$f_1, f_2, \dots, f_n$

where the  $f_k$  are real valued functions of a real variable

$f_k$  is the notation for  $f_k(x)$ . Here the iterative procedure that yields upper and lower approximations converging to a solution of (3) is

SUBJECT USSR/MATHEMATICS/Differential equations CARD 1/1 PG - 644  
 AUTHOR SLUGIN S.M.  
 TITLE The unlimited application of a method of Čaplygin's type for  
 ordinary differential equations of n-th order.  
 PERIODICAL Doklady Akad.Nauk 110, 936-939 (1956)  
 reviewed 3/1957

If for  $m \geq 1$  for the approximative solution of the equation

$$y^{(m)} - f(t, y, y', \dots, y^{(m-1)}) = 0, \quad y^{(k)}(t_0) = \alpha_k \quad (k=0, 1, \dots, m-1)$$

methods of Čaplygin's type are applied, then either it must be assumed that all  $\frac{\partial f}{\partial y^{(k)}}$  have a fixed sign or the methods must be restricted to certain lengths of the interval  $[t_0, t_1]$ . The author proposes a new method, where the length of the interval can be arbitrary and only the boundedness of the  $\frac{\partial f}{\partial y^{(k)}}$  is assumed. The choice of the first approximation, however, is very difficult. The algorithm bases on the functional analysis.

TITLE: Iteration Method of the Unilateral Approximations of the Solutions of Operator Equations. (Iteratsionalnyy metod odnostoronnikh priblizheniy pesheniya operativnykh uravneniy, Russian).

PERIODICAL: Izvestia Akad. Nauk SSSR, Ser. Mat., 1957, Vol 21, Nr 1, pp 117 - 124 (U.S.S.R.)  
Received: 4 / 1957

Reviewed: 5 / 1957

ABSTRACT: This paper deals with a generalized scheme of the formation of approximations in the sense of S.A. Tschaplygin - upper and lower approximations of the solution of an operator equation. Approximations alternate: if the previous approximation happens to have been the lower, the next is the upper and vice versa. The scheme was made concrete by some types of equations.

It is said that, if S.A. Tschaplygin's method is to be used, and also in the case of several varieties of this method, it is necessary to apply either a sign constancy to the corresponding generatrix in the linear part of the equation concerned, or to refer to the part of the modification of arguments which is limited by certain conditions. It is also recommended to apply the algorithms of the approximated solution of operator equations, the applicability of which is unlimited, and which (as also in

 TITLE: Approximative Solution of Implicitly Given Integral Equations  
 (Priblizhennoye resheniye integral'nykh uravneniy, zadannykh v  
 neyavnom vide).  
 PERIODICAL: Matematicheskiy Sbornik, 1957, Vol. 43, Nr 1, pp. 3-8 (USSR)  
 ABSTRACT: For the integral equation

$$(1) \quad F(x, y(x), Y) = 0$$

where it is  $Y = \int_a^x K(x, s, y(s)) ds$  and  $a$  either  $-b$  or  $-x$ ,

a successive method of Chaplygin type is given.

The continuous functions  $u_0(x)$  and  $v_0(x)$  are assumed to satisfy on  $[a, b]$  the inequalities  $u_0(x) \leq v_0(x)$  and

$F[u_0] \leq 0 \leq F[v_0]$ , where  $F[y]$  denotes the left side of (1).

For all continuous functions  $y(x)$ ,  $u_0(x) \leq y(x) \leq v_0(x)$  let  $F$  and  $K$  be continuous functions of their arguments and let

$$\frac{\partial F}{\partial y} \leq 1, \quad \frac{\partial F}{\partial Y} \leq \Lambda \leq 0, \quad \frac{\partial K}{\partial y} \geq N \geq 0.$$

TITLE: Some Applications of Two-Sided Approximation Methods (Nekotoryye primeneniya metodov dvustoronnikh priblizheniy)

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy. Matematika, 1958, Nr 6, pp 244-256 (USSR)

ABSTRACT: The present paper contains a further development of the methods for the approximate solution of operator equations elaborated by the author in earlier papers [Ref 1,2,3]. The first and the second paragraph of the paper contain only certain improvements of the results obtained in [Ref 1,2,3]. § 3 contains applications to the Cauchy problem  $y'' - f(t, y, y') = 0$ ,  $\alpha y(a) + \beta y'(a) = \mu$ ,  $\gamma y(b) + \delta y'(b) = 0$ . § 4 considers the solution of an integro-differential equation with ordinary derivatives. § 5 treats systems of differential equations with a retarding argument. In § 6 the author uses the method for the solution of systems of implicit functions proposed by the author in [Ref 9]. There are 9 Soviet references.

TITLE: A Modification of the Abstract Analogue of the Method of Chaplygin  
(Vidoizmeneniye abstraktnogo analoga metoda Chaplygina)

PERIODICAL: Doklady Akademii nauk, SSSR, 1958, Vol 120, Nr 2, pp 256-258 (USSR)

ABSTRACT: Baluyev [Ref 1] and the author [Ref 2] proposed approximate methods for the solution of the operator equations in semi-ordered spaces. These methods based on the method of Chaplygin for the solution of differential equations and, in the present paper, they are denoted as the "abstract analogues". The paper contains proposals for the simplification of the very extensive algorithms of [Ref 1] and [Ref 2]. Some examples for the application to ordinary differential equations are given. There are 6 Soviet references.

TITLE: A Two-Sided Estimate of the Solution of a Linear Functional Equation

PERIODICAL: Doklady Akademii nauk SSSR, 1959, Vol 127, Nr 1, pp 34-36 (USSR)

ABSTRACT: Let  $X$  be a  $K$  - space (see [Ref 2.7]),  $X'$  its linear semi-ordered subspace. Let  $a, b \in X'$  exist to every  $x \in X$ , so that  $a \leq x \leq b$  in  $X$ . Let  $\bar{X}$  be a  $K$  - space isomorphic to the  $K$  - space  $X'$ . Let  $H, H', H''$  be regular operators of the class  $H_0^0$ ;  $H$  is assumed to transfer  $X$  into itself;  $H', H''$  transfer  $X$  into  $X'$  and let  $0 \leq H'x \leq H^+x$ ,  $0 \leq H''x \leq H^-x$  ( $x > 0$ ,  $x \in Y$ ), whereby  $Y = X$  or  $Y = X'$ . Let  $\Gamma', \Gamma''$  be the restrictions of the operators  $H', H''$  on  $\bar{X}'$ :  $\Gamma'x' = H'x'$ ,  $\Gamma''x' = H''x'$ . Let  $A = \Gamma' + \Gamma''$ ,  $B = \Gamma' - \Gamma''$ .  
Theorem:  $A$  is to be chosen so that  $(I - \bar{A})^{-1} > 0$  and the elements  $\underline{x}$  and  $\bar{x}$  are to be defined by  
 $(I - \bar{A})(\bar{x} - \underline{x}) = \bar{y} - \underline{y} + z$ ,  $(I - \bar{B})(\bar{x} + \underline{x}) = \bar{y} + \underline{y}$ ,

Card 1/3

A Two-Sided Estimate of the Solution of a Linear Functional Equation

SOV/20-127-1-8/65

where  $\bar{y}, y, z \in \bar{X}$  and  $\varphi y < y \leq \varphi \bar{y}$ ,  $\varphi z \geq 2(|H| + \alpha \Lambda)x_1$  is in  $X$ ; here  $x_1 \in X'$  is the estimation of the solution  $x'$  of the equation  $x - Hx = y$  with respect to the absolute value:  $x_1 \geq |x'|$ ,  $\alpha = 1$  for  $Y = X'$ ,  $\alpha = -1$  for  $Y = X$ . Then it is  $\varphi x \leq x' \leq \varphi \bar{x}$  in  $X$ .

A further theorem deals with the special case of the equation  $Hx = y$ , where  $H^{-1} > 0$ .

As an example the author gives the solution of  $x(s) - \lambda S H(s, t)x(t) = y(s)$ , where  $\lambda > 0$  and  $S$  either

$$\sum_{t=1}^m \text{ or } \sum_{t=1}^{\infty} \text{ or } \int_0^1 \cdot dt \text{ or } \int_0^{\infty} \cdot dt.$$

There are 4 Soviet references.
